

Powerful Business Intelligence for Your Vulnerability Management Process

The expanding influence of security legislation and the increased need to demonstrate compliance with internal policies are causing corporate governance and risk management to become a top priority for businesses worldwide. Senior executives need timely, accurate vulnerability management analysis and reporting to help assess business risk and manage compliance.

PatchLink Enterprise Reporting™ is a fully customizable, centralized business intelligence solution that enables organizations utilizing PatchLink Update to consolidate security data from across the enterprise, assess business risk through powerful data analysis, and demonstrate security policy and regulatory compliance status through flexible, customized reporting.

Use key process indicators and mandatory baseline policies to create custom compliance reports.

Consolidate Patch and Vulnerability Data from Across the Enterprise

PatchLink Enterprise Reporting gathers data snapshots from each PatchLink Update server in your environment, on a pre-defined, automated basis. The data is uploaded to a separate Enterprise Reporting server, via secure RSA encrypted transmissions, ensuring that data analysis does not interfere with critical assessment and remediation activities. Once uploaded, the data is consolidated into the central Enterprise Reporting data warehouse repository for centralized analysis and reporting.

Assess Business Risk with Powerful Data Analysis

PatchLink Enterprise Reporting allows you to analyze all aspects of your patch and vulnerability management process. The solution delivers “go anywhere” data mining through a series of interactive reports which allow you to drill into any level of detail. You can start your analysis at a global level, and then drill down to view specific Update Servers. For granular analysis, you can further drill into the results for individual groups or network devices. Enterprise Reporting makes it easy to analyze and interpret a wide range of vulnerability and inventory information, with graphical representations of data for:

- ☐ Compliancy Auditing
- ☐ Workflow Management
- ☐ Trending Analysis
- ☐ Asset Management
- ☐ Productivity Management
- ☐ Process Improvement

Features & Benefits

- ☐ **Auto Report Generation & Distribution :** Schedule automated report generation and email distribution of reports
- ☐ **Comprehensive Report Library :** Over 30 standard reports for vulnerabilities, patch deployment, inventory, compliance, and more are included
- ☐ **Efficient Data Consolidation :** Installs on a separate server to minimize disruptions to PatchLink Update, enabling you to run reports without interrupting key patch and vulnerability tasks
- ☐ **Extensible to 3rd Party Reporting Tools :** Works seamlessly with third party reporting tools including SQL Reporting Services, Business Objects, Crystal Reports, and more
- ☐ **Group Hierarchy Reporting Structure :** Ability to report on custom nested groups created within PatchLink Update and directory service groups designated in your Microsoft® Active Directory™ Services structure
- ☐ **Instantaneous Results :** View current status of vulnerability management efforts with up-to-minute reports
- ☐ **Open Reporting Schema :** Data views make it easier to find reporting data; underlying queries are exposed to easily create custom reports
- ☐ **Policy-Based Reporting :** Flexible policy-based reporting enables you to substantiate compliance with security aspects of government regulations such as Sarbanes-Oxley, HIPAA, FISMA and others
- ☐ **Secure, Automated Data Transfer :** Data from multiple PatchLink Update Servers is automatically transferred to a secure central repository using RSA encryption

Enterprise reporting provides role-based access to data and reports, making it fast and easy for users to identify data that is critical to their area of responsibility and ensuring that information is viewed only by individuals with proper authority. And because many enterprises already have existing analysis and reporting tools, Enterprise Reporting's open database schema integrates with any ODBC/OLEDB compliant reporting tool, including leading third party report generators from Business Objects, Crystal Reports and Microsoft.

“Senior managers today must not only manage and measure the information security program but they must also translate those measurements into meaningful reports for senior executives.”

‘THE MYTHS OF INFORMATION SECURITY REPORTING’ – FORRESTER

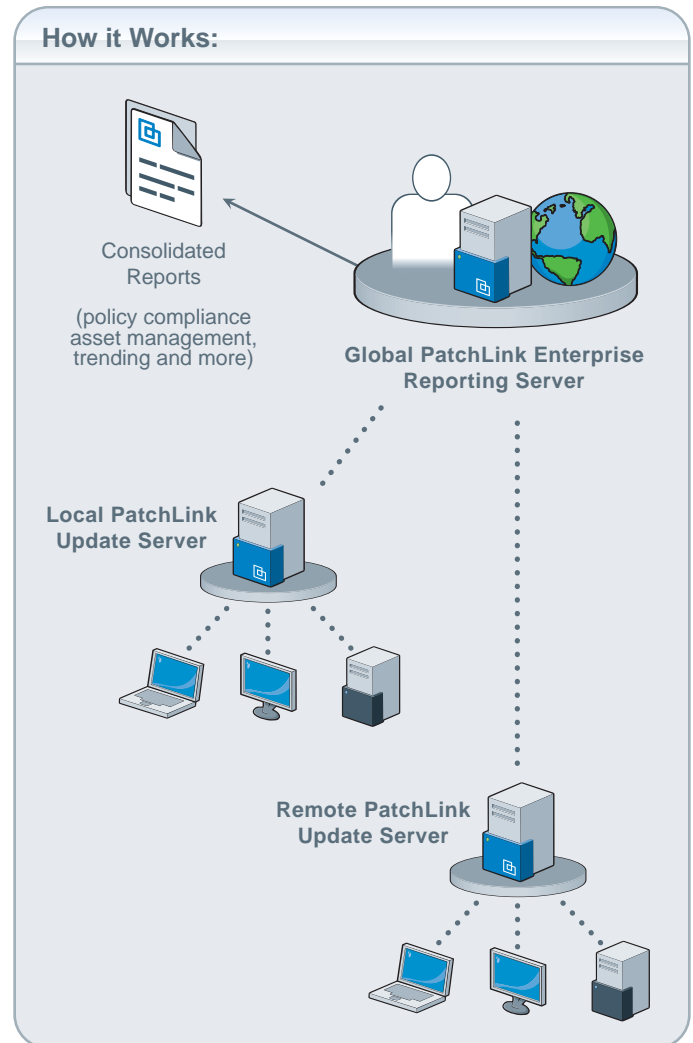

Demonstrate Compliance through Custom Reporting

To effectively demonstrate compliance with IT security policies and industry regulations, you need the ability to rapidly create custom compliance reports based on your unique security policies and key process indicators. By enabling you to create policy-based vulnerability management reports, Enterprise Reporting accurately demonstrates the real-time status of your security posture to support internal policy enforcement or compliance with IT security aspects of government regulations such as Sarbanes-Oxley, HIPAA, FISMA and the European Directive. Enterprise Reporting makes custom reporting easy by providing multiple report building options:

- ☐ Edit any of the two dozen compliance, asset management and trending reports in our Report Library to meet your unique requirements
- ☐ Create your own custom reports using your existing reporting tool
- ☐ Engage the Lumension Security Professional Services team to create custom reports for you

Drive Business Intelligence Across Your Enterprise Today
