

# Lumension® Endpoint Management and Security Suite

Datasheet

## Take Control of Your Endpoints

Today's rapidly changing IT network is more distributed and virtual than ever sensitive data is often stored on remote endpoint platforms, such as laptops and mobile PDAs, and accessed through public WiFi networks connected to a company's IT network via the Internet. Mounting budget pressures are forcing companies to look increasingly at virtual and cloud-based computing alternatives. In addition, traditional point-based technologies and solutions have added more complexity and cost to organizations, because IT teams are focusing on the integration of disparate technologies and have to use many different consoles across multiple products.

As IT environments have become increasingly dynamic and distributed with data flowing across a myriad of devices and platforms, companies have effectively lost control of their information.

## Centralize Visibility of Endpoint Operations and Security

New approaches and solutions are required to ensure enhanced security and compliance with the lowest total cost of ownership possible. The once-separate IT functions of operations and security must collaborate and share information seamlessly to gain the visibility needed to proactively address IT risk in a more effective and efficient manner. Lumension Endpoint Management and Security Suite is an extensible solution suite developed on the *Lumension*® Endpoint Management Platform that reduces management complexity, optimizes TCO, improves visibility and delivers information control back to IT.

## Lumension Endpoint Management and Security Suite provides:

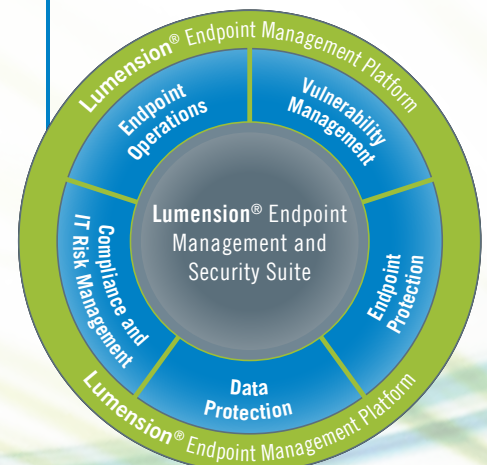

- » Reduced complexity and TCO via an agile infrastructure, which delivers modularly licensed product capabilities through an integrated console and single-agent architecture.
- » Greater control and visibility with an end-to-end approach that includes capabilities to meet endpoint operations, security, compliance and IT risk management needs.
- » Enhanced security through a unique "trust centric" approach that enables rules-based exceptions to security and change management.

## Key Features

- » Integrated Endpoint Management Console
- » Modularly Licensed Product Capabilities
- » Scalable Architecture
- » Single Agent
- » Continuous and Full Discovery of the IT Environment
- » Optimized Compliance and IT Risk Management

## Key Benefits

- » Reduces IT Environment Complexity and Total Cost of Ownership
- » Provides Greater Visibility Into and Control Over Your Network's Endpoints
- » Elevates Security and Compliance Posture
- » Optimizes IT Risk Management
- » Supports Your IT Environment as Business Needs Change

## Lumension Endpoint Management and Security Suite

### Endpoint Operations Product Modules

**Lumension® Patch and Remediation:** Reduces corporate risk and optimizes IT operations through the timely, proactive elimination of operating system and application vulnerabilities across all systems and servers.

**Lumension® Security Configuration Management:** Ensures that endpoints are securely configured and in compliance with industry best practices and regulatory mandates.

**Lumension® Power Management\*:** Reduces power consumption by standardizing power settings of systems across the organization.

**Lumension® Asset Management\*:** Improves operational efficiency and reduces total cost of ownership by measuring the usage of software and hardware assets.

**Lumension® Enterprise Reporting\*:** Provides centralized visibility of IT assets and consolidates vulnerability and configuration data across the enterprise.

### Endpoint Security and IT Risk Management Product Modules

**Lumension® Application Control\*:** Enables the enforcement of application usage policies to ensure that only software that is explicitly authorized or trusted is allowed to execute.

**Lumension® AntiVirus\*:** Provides comprehensive protection against all malware including viruses, spyware, Trojans and adware.

**Lumension® Device Control\*:** Identifies all removable devices that are now or have ever been connected to your endpoints and enforces device / port access and data encryption policies to prevent data loss and/or theft.

**Lumension® Risk Manager\*:** Automates compliance and IT risk management workflows and provides necessary visibility of people, processes and technology across the entire organization.

*\*Available as an integrated/interfaced product module within the Lumension Endpoint Management & Security Suite 2010*

## Key Features

**Integrated Endpoint Management Console:** Web-based console and workflow-based navigation simplify and optimize IT operations.

**Modularly Licensed Capabilities:** An extensible platform that enables both Lumension capabilities as well as 3rd party developed capabilities to be “pluggable”.

**Continuous and Full Discovery of the IT Environment:** Integrates award-winning solution capabilities to provide complete discovery of what’s in your IT environment, including capabilities such as application whitelisting, device control, vulnerability management, data loss prevention, anti-virus and configuration management.

**Scalable Architecture:** Delivers both pull and push approaches to endpoint communication and policy distribution.

**Single Agent:** Flexible agent architecture delivers services on the fly without requiring burdensome upgrades or increased agent bloat, provides easy agent install and uninstall capabilities, and offers self-monitoring and recovery capabilities.

**Optimized Compliance and IT Risk Management:** Streamlines compliance and IT risk management workflows and ensures continuous monitoring of compliance and IT risk postures.

## System Requirements

- » **OS:** Windows Server 2003 – Web, Standard, or Enterprise Edition, R2 – Standard or Enterprise Edition with SP2 or later (x86); Windows Server 2008 – Web, Standard or Enterprise Edition (x86/x64)
- » **Database Server:** SQL Server 2005– Express, Standard, or Enterprise Edition SP3 (x86); SQL Server 2008 – Express, Standard or Enterprise Edition (x86/x64)
